SKILLS

Backend
Node.js / Express · Laravel (PHP)
REST API · Swagger / OpenAPI

Frontend & Mobile
Angular · TypeScript / JS
Tailwind · Bootstrap · Flutter

Security
mTLS · PKI / X.509 · JWT · OTP
OWASP: XSS, SQLi, IDOR
SAST: Semgrep · SonarQube

DevOps *(junior, self-taught)*
Docker · Linux · Git
CI/CD · GitHub Actions

Networks & Protocols
TCP/IP · HTTP/HTTPS · TLS · DNS · SSH

Databases
PostgreSQL · MySQL · MongoDB
Prisma ORM · Redis

Blockchain
Hyperledger Fabric · Polygon · Solidity

Tools
Bruno · FileZilla

LANGUAGES

French — fluent
English — intermediate

CERTIFICATIONS

Cisco NetAcad
Introduction to Cybersecurity

Orange Digital Center
Web Dev. (Laravel) · MySQL DBMS
Cybersecurity · Prompt Eng. & AI

STRENGTHS

Autonomy · Attention to detail
Problem solving · Teamwork
Fast learner · Self-taught

CECE DJIBRIL PRICEMOU

Full Stack Developer — Application Security & DevOps

PROFILE

Computer Engineering graduate (IST-Mamou, 2026) and full stack developer, **passionate about DevOps and information security**. At **E-cash**, I built a Node.js API for mobile money integration, secured with **mTLS** and **JWT**. Self-taught, I have acquired junior-level DevOps skills (**Docker**, **Linux**, **CI/CD** with **GitHub Actions**, static code analysis with **Semgrep** and **SonarQube**) and a solid grounding in **networks and protocols**. I have built several full stack projects, including **IdentiGuinée**, which placed 3rd at the MIABE Guinea Hackathon, and I aim to deepen these fields through a master's degree.

PROFESSIONAL EXPERIENCE

Full Stack Developer — E-cash
Aug 2026 – Oct 2026
Dixinn, Conakry, Guinea · 3-month internship

- Developed a **Node.js** REST API (about twenty endpoints) integrating a mobile money platform: authentication, accounts, balance, scheduled transactions, vouchers and customer onboarding.
- Designed a **mutual TLS (mTLS) authentication** module to secure exchanges with a partner.
- Secured routes with **JWT**, including a secondary **OTP** login flow.
- Integrated the APIs into the **Angular** frontend.
- Tested endpoints with **Bruno**, diagnosed partner-side errors (unavailable routes, access rights) and reported them to the relevant teams.
- Deployed and updated the application on a remote server (FileZilla).

Technical Intern — Pariso Print
2022 – 2024
Conakry, Guinea · summer internships (2 years)

- Set up workstations, performed maintenance and resolved incidents in a production environment; documented all interventions.

PROJECTS

IdentiGuinée — *3rd place, MIABE Guinea Hackathon*
Blockchain-based civil identity prototype (PKI / X.509, chaincode) to digitize Guinea's civil registry, built as a team under tight time constraints.
Angular · Node.js · Hyperledger Fabric · Docker

Blockchain Land Registry Platform — *Final-year project*
Land title management ensuring traceability and integrity of real estate transactions; REST API documented with Swagger.
Angular · Node.js · PostgreSQL · Hyperledger Fabric · Polygon · Docker

BaoBaoHealth — *Multi-role healthcare platform (MVP)*
Multi-role architecture (patient, health worker, doctor) improving access to care in rural areas; modules for patients, medical records and role management.
Angular · Node.js · PostgreSQL · Docker

DevStage — *Internship matching platform*
Connects students with companies: internship offers, profiles and application tracking.
Laravel · Angular · PostgreSQL

EduSmart & Academic Forum — *Education solutions*
School management web app and mobile academic forum app with moderation rules.
Angular · Node.js · PostgreSQL · Flutter

EDUCATION

Bachelor's Degree (Licence, 4 years) in Computer Engineering
2022 – 2026
Higher Institute of Technology of Mamou (IST-Mamou), Guinea

Baccalaureate (High School Diploma)
2022
